

Winter Holiday

Homework

Grade-6

2024-25

Instructions:

- The worksheet is divided into three sections Part A, B and C. All the sections are **compulsory**.
- **Part A:** Includes reading the chapters from the Eklavya textbook (Social Studies) and answering the Reader's purpose questions in the notebook and filling the Human Needs Graphic Organiser (WS1/U4/T2). Make sure the questions are copied in the notebook before answering.
- **Part B:** Includes a visit to the National Museum, New Delhi. Visit the Indus valley and Mauryan gallery.
- **Part C:** Choice Board. Refer to instructions given in section C. Attempt the task on a separate sheet of paper.

Part A: Vedic Age

The following tasks will introduce you to the next age after Indus Valley Civilization in India.

Task 1 – (i) Read Chapter 5 – THE PASTORAL ARYANS (Pg 30 – 36).

(ii) Annotate the chapter as you read for the ways in which the needs were fulfilled during the time of Pastoral Aryans.

(ii) Answer the Reader's Purpose questions in the notebook.

Readers' Purpose Questions:

1. Have you seen people travel with large herds of animals even today? Where do you think they come from?
2. What can you learn about the lives of pastoralists by observing these people travelling with the herd today?
3. How was the life of Aryans different from the people of the Villages?
4. What caused wars between the different Aryan Tribes?
5. Why did the Aryans choose a raja?
6. What did the Aryans pray to God for? Is it similar or different to the reasons people pray to Gods today? Explain.
7. Who gave the tribute (bali) to the raja? Why?
8. What did the raja do with these offerings (bali)?

Task 2 – (i) Read Chapter 6 - The EMERGENCE OF SMALL JANAPADAS (Pg 37 – 43).

(ii) Annotate the chapter as you read for the ways in which the needs were fulfilled during the time of Janapadas.

(iii) Answer the Reader's Purpose questions in the notebook.

Readers' Purpose Questions:

1. What were the Janapadas?
2. Why were Rajasuya Yagnas performed?

Task 3 – (i) Read Chapter 7 - THE KINGS OF THE MAHAJANAPADAS (Pg 45-50).

(ii) Annotate the chapter as you read for the ways in which the needs were fulfilled during the time of Mahajanapadas.

(iii) Answer the Reader's Purpose questions in the notebook.

Readers' Purpose Questions:

1. How were the kings of Mahajanapadas different from the chiefs of small Janapadas?
2. Why were the rulers of Mahajanapadas reluctant to perform the Yagnas unlike the rulers of Janapadas?
3. In which states of modern India do the various Mahajanapadas fall? **(Refer Map on page 51 along with a Political Map of India from your Atlas).**

Task 4 – (i) Read Chapter 8 - CITIES OF THE MAHAJANAPADAS (Pg 52-58).

(ii) Annotate the chapter as you read for the ways in which the needs were fulfilled during the time of Mahajanapadas.

(iii) Answer Q1, 6 and 8 from the exercises on Pg 59 in your notebook.

Task 5 – Fill the Graphic Organiser (**Human Needs**) for the ways the needs were fulfilled in the Janapadas (Chp. 5 and 6) and Mahajanapadas (Chp 7 and 8).

Note: Pastoral Aryans and Janapadas as one.

Part B - Visit to the National Museum

Plan a visit to the National Museum, New Delhi. Focus your visit on the sections Indus Valley/Harappan Civilization and the Mauryan Empire. A map of the location of these sections in the museum is provided below.

- **Observe Carefully:** Pay attention to the details of each exhibit and write down key observations.
- **Sketch or Photograph:** If allowed, sketch or photograph the artifacts for future reference.
- **Ask Questions:** Engage with museum guides or educators to learn more about the exhibits.

For the Indus Valley Civilization Section

1. **Artifacts and Objects**
 - Look at the seals, beads, pottery, and tools. Identify the materials used and the craftsmanship.
 - Think about what these objects reveal about daily life, trade, and technology in the Indus Valley.
2. **Urban Planning Models**
 - Observe models or diagrams of cities like Mohenjo-daro and Harappa.
 - Pay attention to the layout, drainage systems, and public baths.
 - Reflect on how these features showcase advanced planning and organization.
3. **Scripts and Seals**
 - Examine the inscriptions and seals with undeciphered scripts, the symbols or animals depicted.
 - Consider why communication systems are vital for a civilization.
4. **Questions to Reflect On**
 - How do the artifacts demonstrate the creativity and artistry of the Indus Valley people?
 - What do these items tell us about their trade networks and cultural practices?

For the Mauryan Empire Section

1. **Sculptures and Art**
 - Examine sculptures, such as the Lion Capital of Ashoka, which is also India's national emblem.
 - Observe the intricate carvings and their symbolic meaning.
2. **Mauryan Coins and Tools**
 - Take note of the coins and tools displayed.
 - Reflect on what they reveal about the economy, trade, and technology of the Mauryan Empire.
3. **Questions to Reflect On**
 - What do the artistic and architectural achievements tell us about the cultural advancements of this period?

Part C - Choice Board

Instruction: Attempt questions from either of the rows given in the choice board below according to the marked arrows. Attempt this task on a separate sheet of paper.

A

B

C

D

Create cave paintings depicting scenes from daily life during the Stone Age (Paleolithic or Neolithic). Your work should express the lifestyle of early humans clearly.	Write a diary entry or story from the perspective of a person living during the Stone Age or in the Indus Valley.	Illustrate a comic strip that depicts a significant event or daily life in the Stone Age or Indus Valley Civilization.
Design your own unique Indus Valley seal with intricate symbols and patterns.	National Museum Visit Analyse two primary sources related to the Stone Age or Indus Valley and share your findings with the class. 1. Illustrate the artefacts. 2. What materials were used to make these artifacts, and where might these materials have come from? 3. What do these artifacts tell you about how people in the Stone Age /Indus Valley civilisation met their basic needs? 4. What does this artefact teach us about the people of that era?	1. Participate in a group discussion with your family members about the changes and continuities in societies from the Stone Age to the present day. Make sure that you first explain the 6 needs to the participants. Summarize your discussion in 200-250 words highlighting the different perspectives of various group members. 2. Explain what according to you and your group members should have continued and why, and what should have changed and why? Substantiate your arguments with rationale thinking.
Make a clay model 3D Paper model of a Stone Age tool (hand axe, spearhead) or an Indus Valley artifact (pottery, figurine).	Design a puzzle, crossword, or riddle related to the Stone Age or Indus Valley, or write a poem or joke about the time period.	Design a Timeline from Stone Age to Indus Valley Civilization, depicting on it the key events of that time period using illustrations and thought bubbles.

WS1/U4/T2

Name: _____

 Subject: Expedition

Class _____

Date: _____

Learning Standards:

- Synthesises information related to various historical developments and distinctive features of ancient Indian human cultures across different time periods and places.
- Analyses the diverse types of sources, their importance and study them to reconstruct history and arrive at valid inferences to describe issues, events and personalities of the past.

Part A: Instruction:

Fill in the details for the human needs from the era you are analyzing currently.

Era Under Study: _____

Time period: _____

HUMAN NEEDS

- Food and Water
- Safety
- Shelter/Architecture
- Belongingness/ Family/ Community/ Social norms/ Religion
- Clothing/Fashion
- Self-Expression/Communication/ Language/Literature/Art and Culture
- Trade and Wealth
- Administration

S.No	Need	Evidence for the need and the ways the needs were fulfilled	
		Janapadas	Mahajanapadas
1.			
2.			

S.No	Need	Evidence for the need and the ways the needs were fulfilled	
3.			
4.			
5.			

S.No	Need	Evidence for the need and the ways the needs were fulfilled	
6.			
7.			
8.			

Q. What can you infer about the distinctive features and developments in these two time periods?

JANAPADAS

GRADE - 6

Embrace the Winter Wonderland of Words: A Holiday Reading and Writing Adventure!

Dear Readers,

As the winter chill blankets the world in a serene hush, it's the perfect time to cozy up with a good book and let your imagination dance through the snowflakes of creativity.

Welcome to our Winter Holiday Reading and Writing Adventure! This season, we invite you to embark on a literary journey that warms the soul and ignites the spark of storytelling within.

Happy reading and writing!

Activity 1:

- Read **at least 2 books** (including your book club book) from different genres issued by you from the library (*You may refer to the list of recommended books below.*)
- For the book club book, respond to the book club prompts given on page 104 of the Literacy Handbook. Write your answers in your English notebook.

Activity 2:

Update your reading log, reading goal and don't forget to fill in your reading tracker every day in your Literacy Handbook.

Activity 3A: Poetic power

"Reading poetry is an adventure in renewal, a creative act, a perpetual beginning, a rebirth of wonder."

- Edward Hirsch

Poetry recitation is more than just reciting words from memory. It is about bringing the poem to life, conveying its meaning and emotion to your audience through your voice, gestures, and facial expressions.

You can click on the links given below to watch a few sample poetry recitation videos.

Sample Poetry Recitation Videos:

- ['If' by Rudyard Kipling](#)
- ['Pied Beauty' by Gerard Manley Hopkins](#)

Given below are some suggested poets. Please choose any one poem written by any of these poets and prepare to recite it in class. You can visit the suggested websites to browse, explore and select a poem that speaks to you. Make sure that the selected poem has **at least 3 stanzas**.

Suggested Poets:

1. Shell Silverstein
2. Robert Frost
3. Langston Hughes
4. Jacqueline Woodson
5. Lewis Carroll
6. Jack Prelutsky
7. A.A Milne
8. Mary Oliver
9. Elizabeth Acevedo
10. Rabindranath Tagore

Note to Parents

Please note that this task requires students to browse the internet. We have shared a list of suggested websites. Parental supervision and support while browsing is strongly recommended.

Suggested Websites:

- <https://www.poetryfoundation.org/>
- <http://www.famouspoetsandpoems.com/>
- <https://poets.org/>

Please refer to the poetry recitation rubric below for the presentation criteria.

Activity 3B: Poetry Appreciation

Refer to the poem you memorized for your Poetry Recitation. Identify and analyse the craft tools that the poet has used to keep us interested. In your response, make sure to:

- Discuss the key elements of style and structure, as discussed in class.
- Use your class notes and Literacy Handbook as reference guide.

Make sure that the responses are clear, detailed, and well-organized. Attempt this task in your English notebook.

Poetry Recitation Rubric

Gurugram
2024-25

Name: _____ Grade: __ Section: __ Subject: English Date: _____

Learning Target: I can recite a poem confidently with proper voice modulation and expression.

Criteria	Starting Out	Progressing	Meeting	Exceeding
I can recite the poem at an appropriate pace and use effective pauses to suit the main idea of the poem.	Recitation is choppy and “sing-song.” Delivery is either too fast or too slow.	Recites most parts of the poem at an appropriate pace but with the pauses at the ends of lines rather than at punctuation marks.	Recites the poem at an appropriate pace and mostly pauses meaningfully after a group of words, which is suitable to the main idea of the poem.	Recites the entire poem at an appropriate pace and uses pauses effectively to suit the main idea of the poem.
I can recite in a clear and distinct voice that is heard and the words are pronounced correctly.	Slurs, or mumbles, mispronounces a few words.	Recites before an audience but requires to be heard more clearly and distinctly. Pronounces some difficult words correctly.	Recites with a clear and distinct voice and the most words are pronounced correctly.	Recites clearly and distinctly using the correct pronunciation which can be heard by the entire audience.
I can make consistent eye contact with the audience.	No eye contact with the audience.	Makes minimal eye contact with the audience.	Makes consistent eye contact with the audience.	Holds the attention of the entire audience with the use of direct eye contact.
I can modulate my voice and use an appropriate tone to convey the meaning of the poem.	Uses a monotone voice.	Conveys the meaning of the poem by displaying some level of voice modulation.	Modulates voice with appropriate emphasis and tone.	Displays and generates interest and enthusiasm in the entire audience with the use of proper voice modulation and tone to convey the meaning of the entire poem.

Criteria	Starting Out	Progressing	Meeting	Exceeding
I can use effective gestures and natural body language to interpret and convey the meaning of the poem.	Overly dramatic body language; body language distracts the audience or no gestures.	Stands straight sometimes and uses very minimal gestures.	Stands straight, using fairly natural gestures and body language to convey the meaning of the poem.	Displays and generates interest and enthusiasm in the entire audience with his/her straight posture; effective gestures and natural, confident body language to convey the meaning of the entire poem.
I can quickly recover from minor mistakes and display little or no nervousness.	Nervousness is evident; takes time to recover from mistakes.	Recovers from mistakes with some hesitation.	Quickly recovers from minor mistakes and displays little or no nervousness.	Is relaxed and self-confident during the poetry recitation.
I can recall from memory the entire poem without any pause or hesitation.	Unprepared for the recitation and prompting is required several times.	Recalls a few sections of the poem from memory.	Recalls from memory almost the entire poem without pauses and hesitation.	Effortlessly presents the poem with confidence.

Name:**Grade: 6****Date:****Subject:** Mathematics Winter Assignment

Learning Targets

I can comprehend and solve multistep, multi-operation word problems based on different concepts.

I can solve problems related to fractions, decimals Geometry, and signed numbers.

Culture and Craftsmanship Targets

I can consistently do my work neatly and clearly with statements, proper headings, date and legible handwriting.

I can recheck my work so that there are no errors and thus demonstrate a high degree of accuracy in the solutions.

1. Solve them.

a) $\frac{5}{24} + \frac{4}{15} =$

b) $2\frac{1}{4} + 4\frac{5}{8} + \frac{1}{2} =$

c) $3\frac{7}{10} - 2\frac{3}{5} =$

d) $\frac{1}{6} + \frac{7}{12} + \frac{2}{3} =$

e) $2\frac{4}{8} - \frac{12}{12} =$

f) $\frac{19}{21} - \frac{11}{15} =$

2. Complete the following by making equivalent fractions:

a) $\frac{3}{4} = \frac{\quad}{8} = \frac{24}{\quad} = \frac{21}{\quad}$

b) $\frac{5}{7} = \frac{\quad}{28} = \frac{45}{\quad} = \frac{\quad}{35}$

c) $\frac{2}{3} = \frac{8}{\quad} = \frac{\quad}{27} = \frac{20}{\quad}$

3. Reduce the following fractions to its simplest form.

$$\frac{66}{143} =$$

$$\frac{52}{78} =$$

$$\frac{28}{42} =$$

$$\frac{42}{56} =$$

4. A noodle recipe requires 6 kg 900 gm of flour. What weight of flour will be needed to make $\frac{1}{3}$ of the recipe? If Hari has 2.03 kg of flour, will it be more or less than what is required to make $\frac{1}{3}$ of the recipe? How much less or how much more?

5. Meenu runs $1\frac{1}{4}$ km every day. She was unwell and that day she could cover only 0.957 km distance. How much less distance did she run that day?

6. Rani had to decorate the Christmas tree so she bought two rolls of ribbon – red and green. The length of the red ribbon was $2\frac{2}{15}$ m which was $\frac{1}{5}$ m more than the length of the second roll of ribbon which was green in colour. What was the total length of the ribbon bought by Rani? (Mention in fraction)

7. An apple orchard grew 27 tons of apples. $\frac{2}{9}$ of the total weight of apples was used to prepare apple sauce. $\frac{3}{7}$ of the remaining weight of apples was used to make apple jam and the rest of the apples were sold to the supermarket. How many tons of apples were sold to the supermarket?

8. Radhika bought $2\frac{1}{4}$ m of cloth for her trousers and 3.8 m of cloth for her shirt. Find the total length of cloth bought by her for both things. Express the answer in decimals.

9. Hriday must reach his friend's place which is $28\frac{1}{2}$ km from his house. He travels 17.23 km by taxi, 6 km 85 m by rickshaw and covers the rest of the distance on foot to reach his friend's place. Find the distance covered by him on foot. Express the answer in decimals.

10. Sunita bought $5\frac{3}{4}$ kg of fruits and 3 kg 65 g of vegetables and puts them in a jute bag. If the bag with these contents weighs 9.1 kg find the weight of the empty bag. Express the answer in decimals.

11. Arrange the following numbers in an ascending order.

a. $-2\frac{3}{4}$, $+2.8$, -2.6 , $+2.75$, -2.06

b. $-8\frac{1}{4}$, $+8\frac{12}{24}$, -8.14 , -8.104 , $+8\frac{1}{5}$

c. $-\frac{3}{6}$, $-1\frac{7}{28}$, $+\frac{2}{4}$, $+\frac{1}{3}$, -1.205 , $+1\frac{1}{8}$

12. Write each of the following as decimals.

a) $30 + \frac{25}{100} + \frac{5}{1000} =$

b) $60 + 4 + \frac{4}{1000} =$

c) $5005 + \frac{5}{100} + \frac{5}{10000} =$

d) $5 + \frac{9}{10} + \frac{3}{1000} + \frac{8}{10000} =$

13. Solve the following

$$6.89 + 38.96 + 0.388$$

$$4.09 + 119.04 + 11.1$$

$$23 - 11.492$$

$$49.002 - 32.2$$

14. Fill in the boxes in the following table:

Net Wealth Position	Loan	Cash
-94		Rs. 10
-125		
+34	Rs. 45	
	Rs. 80	Rs.189
0		

15. Make a number line from -5 to +5 and locate the following numbers on it.

$$+ 4 \frac{1}{2}, -3.5, +4.05, -3.05, +\frac{1}{10}, -\frac{4}{5}$$

16. Make a number line from 0 to 1 km and locate the following numbers on it. (In decimals)

$$400\text{m}, \frac{1}{2}\text{km}, 20\text{m}, 0.6\text{km}, 0.06\text{km}$$

17. Only 3 of the following 4 points can be joined by a straight line.

Which point does NOT lie on the line?

1. P

2. Q

3. R

4. S

18. How many squares are there in the figure below?

19. Which of the following are polygons?

(I)

(II)

(III)

(IV)

1. only I

2. only I and II

3. only I, II and III

4. all - I, II, III and IV

20. What type of triangle is one shown below?

1. Acute angled triangle

3. Obtuse angled triangle

2. Right-angled triangle

4. None of the above

21. Babu arranged 4 ice-cream sticks as shown below.

Which of these ice cream sticks are perpendicular to each other?

1. P and Q
2. Q and R
3. P and S
4. R and S

22. Which of these is a scalene triangle?

1. P
2. Q
3. R
4. (none of these)

23. In which of these figures, is/are the angle shown a right angle?

figure 1

figure 2

figure 3

figure 4

24. Here is the flag of Nepal, the only national flag that is not rectangular.

The measure of the angle marked on the right side of the flag

1. equal to 90° .
2. less than 90° .
3. more than 90° .
4. (We cannot say for sure.)

25. Three friends plan to plant trees in their respective gardens. The number of trees they plan to plant is 84, 252, and 210 respectively. What is the greatest number of trees they should plant in each row such that there are equal number of trees in each row? How many such rows would be there in each one's garden?

26. Shown here are 3 IDENTICAL circles with centers at P, Q, and R. Their centers are joined together with lines to form a triangle.

- What type of triangle is ΔPQR ?
1. a scalene triangle
 2. an isosceles triangle
 3. an equilateral triangle
 4. (This cannot be said as the lengths of the sides of the triangles are not known)

27. Which of these sets could be the measures of the angles of a right-angled triangle?

1. $40^\circ, 40^\circ, 100^\circ$
2. $20^\circ, 30^\circ, 130^\circ$
3. $60^\circ, 60^\circ, 60^\circ$
4. $40^\circ, 50^\circ, 90^\circ$

28. Shade the given figures as per the fraction mentioned below it.

$$\frac{1}{5}$$

$$\frac{4}{6}$$

$$\frac{3}{16}$$

$$\frac{1}{10}$$

29. Write the numbers from the given number names.
- a) Eight Million Seventy-Three Thousand forty-four _____
 - b) Seven crores two lakh and eighty-two _____

30. Hari ordered 15.25 kg of ladoos on his son's birthday. Out of this 10 kg 50 g of ladoos were consumed and the remaining ladoos were packed in small packets of 100 gm each. Can you tell how many packets were made?

31. How many pieces of rope, each measuring 3m 75 cm, can be cut from a 30-meter-long rope?

32. Solve the following using standard algorithm:

(i) $2,07,360 \div 72$

(ii) 3098×67

33. Express as decimals

a. 43 grams as kg =

b. 420 mm as cm=

c. 5 km 45 m as km=

d. 670 mg to grams=

34. Use patterns and answer the following:

a) $5400 \div 200 =$

e) $64 \times 500 =$

b) $5800 \div 100 =$

f) $309999 + 10 =$

c) $56100 \div 5610 =$

g) $90200 - 1000 =$

d) $78 \div 78 =$

h) $308 \times 20 =$

35. A) Given below are the Net Wealth Positions on some days for Baijiu, circle the day in each scenario

where he is at a better position:

a) $+149$ or -389

b) $+63$ or 0

c) -400 or -401

d) -9 or -7

e) -567 or -6

f) 0 or -900

B) Arrange the following numbers in ascending order.

$-2\frac{1}{4}$, $+\frac{15}{30}$, $+\frac{1}{5}$, -2.7 , $-1\frac{4}{8}$, $-\frac{5}{10}$, -0.05

36. Write the new net wealth position, if the initial net position is given and the amount of cash or loan is changed:

- | | | |
|-----------|-----------------------------|--------------------|
| 1. $+35$ | Loan is reduced by Rs. 5 | New net position = |
| 2. -230 | Loan of Rs 100 is decreased | New net position = |
| 3. -57 | Loan is Increased by Rs. 60 | New net position = |
| 4. $+25$ | Added loan of Rs. 50 | New net position = |
| 5. -30 | Added cash Rs. 20 | New net position = |
| 6. $+25$ | Cash is reduced by Rs. 40 | New net position = |
| 7. -55 | Cash is increased by Rs. 20 | New net position = |

37. Fill the crossword puzzle given below.

Geometric Shapes

ACROSS

- 1 A four-sided polygon with two pairs of parallel sides.
- 4 An eight-sided polygon.
- 5 A quadrilateral with four equal sides and four right angles.
- 7 A six-sided polygon.
- 8 A three-sided polygon. The sum of the angles equals 180 degrees.
- 9 A four-sided polygon with one pair of parallel sides.

DOWN

- 1 A five-sided polygon.
- 2 A four-sided polygon having all four sides of equal length.
- 3 A quadrilateral with four right angles and two sets of parallel opposite sides that are equal.
- 6 A collection of points in a plane that are the same distance from a center point.

38. Show the smallest and biggest angles inside this polygon.

39. Answer the following by referring to the figure:

- a. Find the number of triangles in the following figure. Is this figure a polygon. Justify your answer.

b. In Polygon AFBD, name

- i. a pair of adjacent side _____, _____
 ii. Name of the biggest angle _____
 iii. a pair of opposite angles _____, _____
 c. What type of polygon is BEIDJCHB? Write its name

40. Can you make the sum of each side as 17 in this triangle puzzle using numbers from 1 to 9?

41. What fraction of the figure is shaded?

5

Separation of Substances

0652CH05

In our daily life, there are many instances when we notice a substance being separated from a mixture of materials.

Tea leaves are separated from the liquid with a strainer, while preparing tea (Fig. 5.1).

Fig. 5.1 Separating tea leaves with a strainer

Grain is separated from stalks, while harvesting. Milk or curd is churned to separate the butter (Fig. 5.2). As we learned in Chapter 3, we gin cotton to separate its seeds from the fibre.

Perhaps you might have eaten salted *daliya* or *poha*. If you found that it had chillies in it, you may have carefully taken them out before eating.

Suppose you are given a basket containing mangoes and guavas and asked to separate them. What would you do? Pick out one kind and place them in a separate container, right?

Seems easy, but what if the materials we want to separate are much smaller

Fig. 5.2 Butter is taken out by churning milk or curd

than mango or guava? Imagine you are given a glass of sand with salt mixed in it. Impossible, even to think of separating salt from this mixture by picking out grains of sand by hand!

But, why would we need to separate substances like this at all, is what Paheli wants to know.

Activity 1

In Column 1 of Table 5.1, are given a few processes of separation. The purpose of separation and the way separated components are used is mentioned in Column 2 and 3 respectively. However, the information given in Columns 2 and 3 is jumbled up. Can you match each

Table 5.1 Why do we separate substances?

Separation process	Purpose for which we do the separation	What do we do with the separated components?
1) Separate stones from rice	a) To separate two different, but useful components.	i) We throw away the soild component.
2) Churning milk to obtain butter	b) To remove non-useful components.	ii) We throw away the impurities.
3) Separate tea leaves	c) To remove impurities or harmful components.	iii) We use both the components.

process with its purpose and the way separated components are used?

We see that, before we use a substance, we need to separate harmful or non-useful substances that may be mixed with it. Sometimes, we separate even useful components if we need to use them separately.

The substances to be separated may be particles of different sizes or materials. These may be in any three states of matter i.e., solid, liquid or gas. So, how do we separate substances mixed together if they have so many different properties?

5.1 METHODS OF SEPARATION

We will discuss some simple methods of separating substances that are mixed together. You may come across some of these methods being used in day to day activities.

Handpicking

Activity 2

Bring a packet of food grain purchased from a shop to the classroom. Now, spread the grains on a sheet of paper. Do you find only one kind of grain on

the sheet of paper? Are there pieces of stone, husks, broken grain and particles of any other grain in it? Now, remove with your hand the pieces of stone, husks and other grains from it.

This method of **handpicking** can be used for separating slightly larger sized impurities like the pieces of dirt, stone, and husk from wheat, rice or pulses (Fig. 5.3). The quantity of such impurities is usually not very large. In such situations, we find that handpicking is a convenient method of separating substances.

Fig. 5.3 Handpicking stones from grain

Threshing

You must have seen bundles of wheat or paddy stalks lying in fields after

harvesting the crop. Stalks are dried in the sun before the grain is separated from them. Each stalk has many grain seeds attached to it. Imagine the number of grain seeds in hundreds of bundles of stalk lying in the field! How does the farmer separate grain seeds from those bundles of stalks?

One may pluck mangoes or guavas from the trees. But, grain seeds are much smaller than mangoes or guavas. So, plucking them from their stalks would be impossible. How does one separate grain seeds from their stalks?

The process that is used to separate grain from stalks etc. is **threshing**. In this process, the stalks are beaten to free the grain seeds (Fig. 5.4). Sometimes,

Fig. 5.4 Threshing

threshing is done with the help of bullocks. Machines are also used to thresh large quantities of grain.

Winnowing

Activity 3

Make a mixture of dry sand with sawdust or powdered dry leaves. Keep

this mixture on a plate or a newspaper. Look at this mixture carefully. Can the two different components be made out easily? Are the sizes of particles of the two components similar? Would it be possible to separate the components by handpicking?

Now, take your mixture to an open ground and stand on a raised platform. Put the mixture in a plate or sheet of paper. Hold the plate or the sheet of paper containing the mixture, at your shoulder height. Tilt it slightly, so that the mixture slides out slowly.

What happens? Do both the components — sand and sawdust (or powdered leaves) fall at the same place? Is there a component that blows away? Did the wind manage to separate the two components?

This method of separating components of a mixture is called **winnowing**. Winnowing is used to separate heavier and lighter components of a mixture by wind or by blowing air.

Fig. 5.5 Winnowing

This method is commonly used by farmers to separate lighter husk particles from heavier seeds of grain (Fig. 5.5).

The husk particles are carried away by the wind. The seeds of grain get separated and form a heap near the platform for winnowing. The separated husk is used for many purposes such as fodder for cattles.

Sieving

Sometimes, we may wish to prepare a dish with flour. We need to remove impurities and bran that may be present in it. What do we do? We use a sieve and pour the flour into it (Fig. 5.6).

Sieving allows the fine flour particles to pass through the holes of the sieve while the bigger impurities remain on the sieve.

In a flour mill, impurities like husk and stones are removed from wheat before grinding it. Usually, a bagful of wheat is poured on a slanting sieve. The sieving removes pieces of stones, stalk and husk that may still remain with wheat after threshing and winnowing.

Fig. 5.6 Sieving

You may have also noticed similar sieves being used at construction sites

Fig. 5.7 Pebbles and stones are removed from sand by sieving

to separate pebbles and stones from sand (Fig. 5.7).

Activity 4

Bring a sieve and a small quantity of flour from home, to the class. Sieve the flour to separate any impurities in it. Now, make a fine powder of chalk pieces and mix it with the flour. Can we separate the flour and the powdered chalk by sieving?

Sieving is used when components of a mixture have different sizes.

Sedimentation, Decantation and Filtration

Sometimes, it may not be possible to separate components of a mixture by winnowing and handpicking. For example, there may be lighter impurities like dust or soil particles in rice or pulses. How are such impurities separated from rice or pulses before cooking?

Rice or pulses are usually washed before cooking. When you add water to these, the impurities like dust particles

get separated. These impurities go into water. Now, what will sink to the bottom of the vessel — rice or dust? Why? Have you seen that the vessel is tilted to pour out the dirty water?

When the heavier component in a mixture settles after water is added to it, the process is called **sedimentation**. When the water (along with the dust) is removed, the process is called **decantation** (Fig. 5.8). Let us find a few other mixtures that can be separated through sedimentation and decantation.

The same principle is used for separating a mixture of two liquids that do not mix with each other. For example, oil and water from their mixture can be separated by this process. If a mixture of such liquids is allowed to stand for some time, they form two separate layers. The component that forms the top layer can then be separated by decantation.

Let us again consider a mixture of a solid and liquid. After preparing tea, what do you do to remove the tea leaves? Usually, we use strainer to remove tea leaves. Try decantation. It helps a little. But, do you still get a few leaves in your tea? Now, pour the tea through a

Fig. 5.8 Separating two components of a mixture by sedimentation and decantation

strainer. Did all the tea leaves remain in the strainer? This process is called **filtration** (Fig. 5.1). Which method of separating tea leaves from prepared tea is better, decantation or filtration?

Let us now consider the example of water that we use. Do all of us, at all times, get safe water to drink? Sometimes, water supplied through taps may be muddy. The water collected from ponds or rivers may also be muddy, especially after rains. Let us see if we can use some method of separation to remove insoluble impurities like soil from the water.

Activity 5

Collect some muddy water from a pond or a river. If it is not available, mix some soil to water in a glass. Let it stand for half an hour. Observe the water carefully and note your observations.

Does some soil settle at the bottom of water? Why? What will you call this process?

Now, slightly tilt the glass without disturbing the water. Let the water from the top flow into another glass (Fig. 5.8). What will you call this process?

Is the water in the second glass still muddy or brown in colour? Now filter it. Did the tea strainer work? Let us try filtering the water through a piece of cloth. In a piece of cloth, small holes or pores remain in between the woven threads. These pores in a cloth can be used as a filter.

If the water is still muddy, impurities can be separated by a filter that has even

smaller pores. A filter paper is one such filter that has very fine pores in it. Fig. 5.9 shows the steps involved in using a filter paper. A filter paper folded in the form of a cone is fixed onto a funnel (Fig. 5.10). The mixture is then poured on the filter paper. Solid particles in the mixture do not pass through it and remain on the filter.

Fig. 5.9 Folding a filter paper to make a cone

Fig. 5.10 Filtration using a filter paper

Fruit and vegetable juices are usually filtered before drinking to separate the seeds and solid particles of pulp. The method of filtration is also used in the process of preparing cottage cheese (*paneer*) in our homes. You might have seen that for making *paneer*, a few drops of lemon juice are added to milk as it boils. This gives a mixture of particles of solid *paneer* and a liquid. The *paneer* is then separated by filtering the mixture through a fine cloth or a strainer.

Evaporation

Activity 6

Add two spoons of salt to water in another beaker and stir it well. Do you

Fig. 5.11 Heating a beaker containing salt water

see any change in the colour of water? Can you see any salt in the beaker, after stirring? Heat the beaker containing the salt water (Fig. 5.11). Let the water boil away. What is left in the beaker?

In this activity, we used the process of evaporation, to separate a mixture of water and salt.

The process of conversion of water into its vapour is called **evaporation**. The process of evaporation takes place continuously wherever water is present.

Where do you think, salt comes from? Sea water contains many salts mixed in it. One of these salts is the common salt. When sea water is allowed to stand in shallow pits, water gets heated by sunlight and slowly turns into water vapour, through evaporation. In a few days, the water evaporates completely leaving behind the solid salts (Fig. 5.12). Common salt is then obtained from this mixture of salts by further purification.

Fig. 5.12 Obtaining salt from sea water

Use of more than one method of separation

We have studied some methods for separation of substances from their mixtures. Often, one method is not sufficient to separate the different substances present in a mixture. In such a situation, we need to use more than one of these methods.

Activity 7

Take a mixture of sand and salt. How will we separate these? We already saw that handpicking would not be a practical method for separating these.

Keep this mixture in a beaker and add some water to it. Leave the beaker aside for some time. Do you see the sand settling down at the bottom? The sand can be separated by decantation or filtration. What does the decanted liquid contain? Do you think this water contains the salt which was there in the mixture at the beginning?

Now, we need to separate salt and water from the decanted liquid. Transfer this liquid to a kettle and close its lid. Heat the kettle for some time. Do you

notice steam coming out from the spout of the kettle?

Take a metal plate with some ice on it. Hold the plate just above the spout of the kettle as shown in Fig. 5.13. What do you observe? Let all the water in the kettle boil off.

When the steam comes in contact with the metal plate cooled with ice, it condenses and forms liquid water. The water drops that you observed falling from the plate, were due to condensation of steam. The process of conversion of water vapour into its liquid form is called **condensation**.

Did you ever see water drops condensed under a plate that has been used to cover a vessel containing milk that has just been boiled?

After all the water has evaporated, what is left behind in the kettle?

We have thus, separated salt, sand and water using processes of decantation, filtration, evaporation and condensation.

Paheli faced a problem while recovering salt mixed with sand. She has mixed a packet of salt in a small

Fig. 5.13 Evaporation and condensation

amount of sand. She then tried the method suggested in Activity 7, to recover the salt. She found, however, that she could recover only a small part of the salt that she had taken. What could have gone wrong?

Can water dissolve any amount of a substance?

In chapter 4, we found that many substances dissolve in water and form a solution. We say that these substances are soluble in water. What will happen if we go on adding more and more of these substances to a fixed quantity of water?

Activity 8

You will need a beaker or a small pan, a spoon, salt and water. Pour half a cup of water in the beaker. Add one teaspoonful of salt and stir it well, until the salt dissolves completely (Fig 5.14). Again add a teaspoonful of salt and stir well. Go on adding salt, one teaspoonful at a time, and stir.

After adding a few spoons of salt, do you find that some salt remains undissolved and settles at the bottom of the beaker? If yes, this means that no more salt can be dissolved in the amount of water we have taken. The solution is now said to be **saturated**.

Here is a hint as to what might have gone wrong when Paheli tried to recover large quantity of salt mixed with sand. Perhaps the quantity of salt was much more than that required to form a saturated solution. The undissolved salt

Fig 5.14 Dissolving salt in water

would have remained mixed with the sand and could not be recovered. She could solve her problem by using a larger quantity of water.

Suppose, she did not have sufficient quantity of water to dissolve all the salt in the mixture. Is there some way that water could be made to dissolve more salt before the solution gets saturated?

Let us try and help Paheli out.

Activity 9

Take some water in a beaker and mix salt in it until it cannot dissolve any more salt. This will give you a saturated solution of salt in water.

Now, add a small quantity of salt to this saturated solution and heat it. What do you find? What happens to the undissolved salt in the bottom of the beaker? Does it dissolve, now? If yes, can some more salt be dissolved in this solution by heating it?

Let this hot solution cool. Does the salt appear to settle at the bottom of the beaker again?

The activity suggests that larger quantity of salt can be dissolved in water on heating.

Does water dissolve equal amounts of different soluble substances? Let us find out.

Activity 10

Take two glasses and pour half a cup of water in each of them. Add a teaspoon of salt to one glass and stir till the salt dissolves. Go on adding salt, one teaspoon at a time, till the solution saturates. Record the number of spoons of salt that dissolved in the water, in Table 5.2. Now, repeat the same activity with sugar. Repeat this with some other substances that are soluble in water.

What do you notice from Table 5.2? Do you find that water dissolves different substances in different amounts?

Table 5.2

Substance	Number of spoons of substance that dissolved in water
Salt	
Sugar	

We have discussed a few methods of separating substances. Some of the methods of separation presented in this chapter are also used in a science laboratory.

We also learnt that a solution is prepared by dissolving a substance in a liquid. A solution is said to be saturated if it cannot dissolve more of the substance in it.

Summary

- Handpicking, winnowing, sieving, sedimentation, decantation and filtration are some of the methods of separating substances from their mixtures.

- Husk and stones could be separated from grains by handpicking.
- Husk is separated from heavier seeds of grain by winnowing.
- Difference in the size of particles in a mixture is utilised to separate them by the process of sieving and filtration.
- In a mixture of sand and water, the heavier sand particles settle down at the bottom and the water can be separated by decantation.
- Filtration can be used to separate components of a mixture of an insoluble solid and a liquid.
- Evaporation is the process in which a liquid gets converted into its vapour. Evaporation can be used to separate a solid dissolved in a liquid.
- A saturated solution is one in which no more of that substance can be dissolved.
- More of a substance can be dissolved in a solution by heating it.
- Water dissolves different amount of soluble substances in it.

Exercises

1. Why do we need to separate different components of a mixture? Give two examples.
2. What is winnowing? Where is it used?
3. How will you separate husk or dirt particles from a given sample of pulses before cooking.
4. What is sieving? Where is it used?
5. How will you separate sand and water from their mixture?
6. Is it possible to separate sugar mixed with wheat flour? If yes, how will you do it?
7. How would you obtain clear water from a sample of muddy water?
8. Fill up the blanks
 - (a) The method of separating seeds of paddy from its stalks is called _____.
 - (b) When milk, cooled after boiling, is poured onto a piece of cloth the cream (*malai*) is left behind on it. This process of separating cream from milk is an example of _____.
 - (c) Salt is obtained from seawater by the process of _____.
 - (d) Impurities settled at the bottom when muddy water was kept overnight in a bucket. The clear water was then poured off from the top. The process of separation used in this example is called _____.
9. True or false?
 - (a) A mixture of milk and water can be separated by filtration.
 - (b) A mixture of powdered salt and sugar can be separated by the process of winnowing.

- (c) Separation of sugar from tea can be done with filtration.
- (d) Grain and husk can be separated with the process of decantation.
10. Lemonade is prepared by mixing lemon juice and sugar in water. You wish to add ice to cool it. Should you add ice to the lemonade before or after dissolving sugar? In which case would it be possible to dissolve more sugar?

SUGGESTED PROJECTS AND ACTIVITIES

1. Visit a nearby dairy and report about the processes used to separate cream from milk.
2. You have tried a number of methods to separate impurities like mud from water. Sometimes, the water obtained after employing all these processes could still be a little muddy. Let us see if we can remove even this impurity completely. Take this filtered water in a glass. Tie a thread to a small piece of alum. Suspend the piece of alum in the water and swirl. Did the water become clear? What happened to the mud? This process is called loading. Talk to some elders in your family to find out whether they have seen or used this process.

WS1/LS4/T2
Separation of Substances
Name: _____

Subject: Module
Grade: 6 ____

Date: _____

Learning Standard: I can separate the components of various mixtures/solutions using different methods.

Instructions:

- The worksheet contains activities and questions related to the topic 'Separation of Substances'.
- **Some activities require adult supervision. Please be careful and follow instructions exactly.**
- A PDF of the chapter "Separation of Substances" has been published on teamie. You may also refer to your NCERT textbook for the same.

Please perform the 7 activities from the NCERT Chapter 5 on *Separation of Substances*, pages 35-43 and fill in your observations in the table below. Before you start the activities, following materials will be required:

S No	Materials required(10 gms each)	Materials required
1	Whole wheat grains or chickpeas (chhole)	Sieve
2	Pebbles	Filter paper/blotting paper/layers of newspaper
3	Kasuri methi	Funnel
4	Rice grains	Gas stove and pan(for activity 6, under supervision)
5	Wheat flour(atta)/Maida	
6	Tea leaves	
7	Mud/sand/soil	
8	Salt	

Conduct the Steps as listed below:

1. Collect the materials and keep them ready.
2. Read the activity
(as given on the pages, indicated in NCERT Science book)
3. Perform each activity, one by one, as per the instructions.
4. Record your observations after every activity.
5. Complete the Table given below.

Activity No.	Observations	Process Name
Activity 1- Table 5.1 (pg 36) Match the column 1,2 and 3 to explain the separation of substances.	Write the matched statements here.	
Activity 2 (pg 36) Procedure: Mix the Chickpeas with some pebbles. Try to separate the pebbles from chickpeas. Bring whole grain with stones and try to separate the grains or chickpeas Materials Required: Chickpeas , pebbles , grains (10g approx)		
<i>How did you remove the pebbles from the chickpeas? Explain the process.</i> Mention the situations in which this process can be used.		
Activity 3 (page 38) Take a mixture of rice grains and Kasuri Methi with maida/wheat flour. How can you separate the three components of this mixture?		
Explain the above processes. Mention the situations in which this process can be used.		
Activity 4 (page 38-39) (under adult supervision only) Separate a mixture of tea leaves boiled in water Materials Required: One spoon Tea powder, half cup Water Explain the process of separating water from tea leaves.		

Mention the situations in which this process can be used.		
Activity 5 (page 39) Muddy water Materials Required: 1/4 cup Soil and water, filter paper (or 3 layers of newspaper), 1 glass and funnel		
Explain the above processes. Mention the situations in which this process can be used.		
Activity 6 on page 40 (under adult supervision only) Separate salt from salty water Materials Required: Pan, gas stove, 1 spoon salt and half cup water		
Explain the above process. Mention the situations in which this process can be used.		
Activity 7 page 41 (under adult supervision only) Separate sand and salt dissolved in water Materials Required: half cup sand and 4 tablespoon salt and one cup water.		
Explain the above processes used to separate sand from salt. Mention the situations in which this process can be used.		

Final Task

Now, based on your understanding about processes involved in separating different kinds of substances, create a **hand-drawn Infographic** to depict all methods used in separating different substances. It can be on an A3 sheet. *(An infographic is a collection of imagery, visualization like chart, table, pictures, drawing etc and minimal text that gives an easy-to-understand overview of a topic. Infographics use striking, engaging visuals to communicate information quickly and clearly.)*

You can even click photos of some separation methods you use at home regularly. You can present it as creatively as you wish while also including all relevant details.

Please self-assess your Infographic in the rubric given below and submit along with this handout with your name and class clearly marked.

Can you identify these interesting techniques of separation?

Infographic Evaluation Criteria

Criteria	Rating Scale 0-not met the criteria 1-partially met the criteria 2- met the criteria	
	Self Rating	Teacher's Rating
1. All experimental activities given have been conducted and recorded in my Observation table above.		
2. My Infographic includes all the methods listed for separation.		
3. The Design and Layout of my Infographic is hand drawn and aesthetically presented.		
4. All information is accurately depicted.		
5. In the Infographic, I have included real examples used for separation of materials at home.		

हिंदी : शीतकालीन अवकाश गृहकार्य

नाम :

कक्षा : 6

जमा तिथि : 16/01/25

प्रिय विद्यार्थियो,

शीतकालीन अवकाश का आनंद उठाएँ। हिंदी की पुस्तकें, कहानियाँ, समाचारपत्र व अन्य सामग्रियों से हिंदी प्रतिदिन पढ़ने तथा लिखने का अभ्यास कीजिए।

- दिए गए निर्देशों को ध्यानपूर्वक पढ़िए।
- अपने कार्य को सुंदर तथा स्पष्ट लिखावट में कीजिए।
- वर्तनी की शुद्धता पर भी विशेष ध्यान दें।
- नीचे लिखें शीर्षकों पर स्व: लिखित संवाद का प्रस्तुतीकरण अभ्यास करें। आने वाली कक्षाओं में इसका प्रस्तुतीकरण किया जाएगा।

उम्मीद है कि आप यह कार्य करते हुए भरपूर आनंद उठाएँगे।

याद रहे कि इस कार्य को जमा करने की तिथि 16 जनवरी, 2025 है। कार्य पूर्ण करने के बाद अपने अभिभावकों से नीचे दिए गए स्थान पर हस्ताक्षर अवश्य कराएँ।

हस्ताक्षर अभिभावक

तिथि:

निर्देश: नीचे दिए गए पाठ को ध्यानपूर्वक पढ़कर कार्य प्रपत्र कीजिए।

- अमर : माँ, दिवाली के अवसर पर मेरे लिए कौन-सा कपड़ा खरीदोगी ?
- माँ : तुम्हें क्या चाहिए, मुझे बताना बेटे। आज शाम को हम लोग बाज़ार चलेंगे।
- अमर : मैं भी बाज़ार चलूँगा माँ। मैं अपनी पसंद के कपड़े लूँगा।
- अनीता : मैं भी चलूँगी।
- पिता : हाँ बेटे, तुम दोनों तैयार हो जाना। (चारों बाज़ार जाते हैं। कपड़े की दुकान पर पहुँचते हैं।)
- दुकानदार : आइए विनोद भाई, नमस्कार।
- पिता : नमस्ते-नमस्ते! कैसे हैं आप ?
- दुकानदार : आप सभी की शुभकामना से ठीक हूँ। आइए बैठिए।
- माँ : बच्चों के लिए कपड़े चाहिए।
- दुकानदार : अभी दिखाता हूँ बहन जी! वीरू, साहब के लिए चाय - पानी ले आओ।
- पिता : बेटे के लिए सूट का कपड़ा दिखाइए और पैंट - शर्ट के कपड़े भी! अमर बेटे तुम अपनी पसंद के कपड़े देखना।
- दुकानदार : नए पैंट - पीस भी आए हैं। वीरू अच्छे कपड़े निकाल लाओ।
- अमर : अनीता, तुम अपने लिए कपड़ा पसंद कर लो।
- दुकानदार : बेटे, यह पैंट का कपड़ा देखो। यह बहुत अच्छा है।
- अमर : नहीं, यह मुझे पसंद नहीं है। दूसरा कपड़ा दिखाइए।
- अनीता : माँ, यह सूट बहुत अच्छा है।
- माँ : हाँ, यह रंग अच्छा है, लेकिन कपड़ा अच्छा नहीं है।
- दुकानदार : यह लीजिए। बढ़िया कपड़े में, बिल्कुल नया - नया आया है।
- माँ : इसका कपड़ा ठीक है। अमर तुम्हें यह कपड़ा पसंद है ?
- अमर : हाँ, अच्छा है माँ!
- माँ : तेरी पसंद अच्छी होती है, बेटे।
- अनीता : और मेरी पसंद माँ ?
- माँ : तेरी पसंद भी।
- पिता : दोनों कपड़े पैक कर दीजिए।
- दुकानदार : वीरू, ये कपड़े पैक कर दो। यह लीजिए आपका बिल।
- पिता : धन्यवाद!

Chers étudiants

Recording one's voice over a song is the desire of many professional or amateur singers!

Here is an interesting and creative activity for you!!

Learning Target:

- I can sing a simple French song/rhyme with correct pronunciation.

List of Suggestive Rhymes/Songs -

- Alouette:
- Arc en ciel
- Jean Petit qui danse
- Vive le vent

Instructions:

- Select any 1 French Song/Rhyme of your choice to prepare from the above list of 4 preselected songs/rhymes and record a video of minimum 1-2 minutes in French.
- Change of lyrics or additional lines shall not be included in English or any other language
- Pls. mark/ self assess the rubric attached in the Assignment
- Upload your video under the Teamie Assignment latest by 10th Jan 2025

Criteria/Parameters for marking on the rubric:

- **Timing-** synchronization with music (1-2 minutes song/rhyme only, in French)
 - **Pronunciation-** enunciation & clarity
 - **Voice Modulation-** pitch, tone, and pace
 - **Mastery of Lyrics-** eye contact, reference to notes/lyrics, errors, or lapses of memory
 - **Task Achievement-** confidence, audience appeal, gestures, and overall impact of song/rhyme
- ♣ PFA in the Lesson on Teamie - Related PPT, Videos/ Links (including Karaoke) as ready reference.

Bonnes vacances d'hiver!!

Amicalement

Votre Prof.

Dear Students,

We'll be starting our new module on Digital Citizenship after the winter break. Over the winter break, you have to reflect on the important topic of **Digital Citizenship as a responsible Digital Citizen**. Please go through the Digital Citizenship lesson on Teamie and answer the questions given below. You must also use the **research strategies** you have learnt in previous grades (outlined below) to help you find **reliable information and provide thoughtful answers** to the questions.

Please write your responses in complete sentences and provide examples or references from your research wherever possible. Submit your answers on Teamie in Google Doc.

Wishing you a wonderful winter break and looking forward to your insights!

Research Strategies to Use:

- **Keywords:** Use specific and relevant words to find the most accurate information.
- **Boolean Operators:** Use AND, OR and NOT to narrow or expand your search results.
- **Synonyms:** Try using different words or phrases with similar meanings to improve your results.

Tips for Checking Source Credibility:

- **Author's Credentials:** Look for information about the author's qualifications, expertise, and affiliations.
- **Reputable Sources:** Ensure the website or publication is trustworthy (e.g., .gov, .org or well-known news outlets).
- **Purpose of Content:** Consider if the content is objective or if it has a bias or commercial intent.

Questions to Answer:

1. How can you balance the responsibilities of being a good digital citizen with managing your screen time effectively?
2. Why is this balance important for your personal well-being and relationships?
3. Can your online identity be different from who you are in real life? Please explain the answer.
4. Why is it important to ensure that both your online and real-life identities reflect the real you in a safe and responsible way?
5. What types of personal information are scammers most likely to target to cause harm?
6. Why is it important to recognize phishing attempts?
